

Getting Started with AWS

Setup windows system to run sample project from github.

- Download Ruby installer from link given below:
<https://github.com/oneclick/rubyinstaller2/releases/download/2.4.1-1/rubyinstaller-2.4.1-1-x64.exe>

- Once you are done with installing ruby, please run following commands to install dependencies: (on Command Prompt)
 - ◆ `gem install bundle`
 - ◆ `bundle install`

- You will find two help doc in the clone project
 - ◆ AWS IAM Help Doc
 - ◆ Setup Help Doc

- Now run following command after reading AWS IAM Help doc: (on Command Prompt)
 - ◆ `export AWS_KEY=<your IAM key here>`
 - ◆ `export AWS_SECRET=<your IAM secret here>`
 - ◆ `rb faceapp.rb`
 - ◆ Open localhost:4567 on browser

- Since this sample project is developed in ruby, you can refer to AWS official Rekognition Documentation at:
<http://docs.aws.amazon.com/sdkforruby/api/Aws/Rekognition/Client.html>

That's it. Enjoy coding !!!
